Top Skills

Next.js
React
TypeScript

Languages

Inglês (Native or Bilingual)
Português (Native or Bilingual)
Alemão (Professional Working)

Certifications

Using MongoDB with Node.js
The Complete SQL Bootcamp
Using Python for Research
Agentic React + Node
Foundational C# with Microsoft

Filipe Pereira

Senior Frontend Engineer | React & TypeScript Specialist | Scalable SaaS Platforms | UI/UX Focused | API Integration
Brazil

Summary

I am a software engineer with over 4 years of experience working mainly in the fields of forestry and real estate, passionate about developing scalable and responsive web applications with React, Next.js, and TypeScript, with excellent technical skills, meticulousness, and a successful history developing SaaS applications, design systems, and data-driven UIs in Agile, cross-functional, and remote-first international environments. I helped my projects become integrated in the routines of their clients and enabled savings of thousands of Brazilian reais monthly, providing solutions leveraging a strong grasp of component-based architecture, UI/UX principles, state management (Zustand, Redux), and end-to-end testing (Cypress, Jest). Interested in continuing to create and enhance solutions in new, relevant projects and working with curious, open-minded collaborators. Fluent in English, Portuguese, and conversational German. GitHub: <https://github.com/lehmannse> Portfolio: <https://filipelehmann.vercel.app>

Experience

Virtustant

Senior Software Engineer
January 2026 - Present (6 months)
Curitiba, PR

- Built the platform's role-based access-management and hierarchical company-structure system (user roles, claims, peer-visibility rules, teams, and scoped account pickers), now governing 90+ users across 20+ B2B client organizations and expanding market fit to clients with larger teams and more complex organizational structures.

- Designed and built the original Alerts system (configurable alert definitions with an admin builder, the underlying data model and migrations, and a lifecycle-driven alert inbox), turning a manual follow-up process into automated, trackable workflows.

- Introduced PostgreSQL/Supabase RPCs for scoped-visibility queries and partial updates, reducing redundant requests and improving API response times on a platform serving 400,000+ API requests per week.
- Architected and built the company's native iOS/Android app (Expo / React Native / TypeScript) from scratch as sole mobile engineer, delivering an offline-first experience (a durable write-sync queue, filesystem-backed media uploads, and resilient JWT session/refresh handling) so field technicians can run inspections with no connectivity.
- Mirrored the full web feature set on mobile (calendar, inspection capture with signatures, alerts, push notifications, geofencing, PDF reporting) and built the shared backend seams it depends on: the mobile auth-token response, mobile push delivery (device registry + send path), and server-rendered PDF endpoints reused across web and mobile.
- Established the mobile engineering baseline (trunk-based, CI-gated delivery with ~768 Jest unit tests and Maestro end-to-end flows).

Technologies: React, Next.js, React Native, Expo, TypeScript, Node.js, PostgreSQL, Prisma, Supabase, TanStack React Query, React Hook Form, Zod, Tailwind, shadcn/ui, Firebase (push), Google Maps, @react-pdf/renderer, Jest, Maestro, Git, CI/CD.

Lehmann Dev

Senior Software Engineer

September 2025 - January 2026 (5 months)

Curitiba, Paraná, Brazil

Built a modern, type-safe restaurant ordering platform end-to-end, discovery to checkout and order tracking, with a reusable UI system, resilient auth, OpenAPI contracts, and containerized infra on a VPS.

- End-to-end UX: restaurants catalog, menu/item details, cart, checkout, and orders with Next.js App Router.
- Orders + UI polish: expandable details, smooth animations, skeleton loading, robust empty/error states, pt-BR currency/date, responsive dark-mode styling.

- Auth & security: Google OAuth, token refresh via a unified request layer (fetchWithAuthRetry), role-based access, CORS/rate limiting.
- Reusable UI kit: Radix UI + Tailwind v4 components (buttons, cards, badges, dialogs, drawers, popovers, tabs, skeletons, toasts).
- Back-office: categories/items CRUD, option groups/options, drag-and-drop reordering (DnD Kit).
- Admin area: enterprises, locations, users, integrations, and settings with clear route organization.
- Type-safety & validation: OpenAPI-first contracts, generated TypeScript types, Zod + React Hook Form, consistent error envelopes.
- State management: predictable client state with Zustand and scoped providers (e.g., cart).
- Infra & DevOps: Dockerized services with multi-env configs; deployed on a VPS behind reverse proxy with SSL, health checks, structured logging and metrics.
- Storage & media: AWS S3 for asset/uploads with presigned URLs and lifecycle policies.
- Performance & DX: Next.js 15 + Turbopack, code-splitting, cache strategies/ISR where appropriate; strict lint/format with Biome; Tailwind v4 via PostCSS.
- SEO & accessibility: SSR/metadata, Open Graph/Twitter cards, sitemap/robots, semantic markup, keyboard-friendly interactions, Core Web Vitals improvements.

Tech: Next.js 15, React 19, TypeScript, Tailwind v4, Radix UI, Zustand, React Hook Form, Zod, DnD Kit, TanStack Table, Framer Motion, next-themes, Biome, PostCSS, Node.js, OpenAPI, Docker, AWS S3, VPS (reverse proxy/SSL).

Pixlog

Software Engineer

June 2024 - June 2025 (1 year 1 month)

Curitiba, Paraná, Brasil

- Spearheaded the frontend development for a scalable B2B SaaS platform that transformed a company from an operational tool provider to a complete management solution for clients in the forestry and heavy industrial sectors.
- Integrated data from AR measurements, which resulted in clients quickly adopting the platform into their daily office routine and workflow. This was achieved by building a dynamic dashboard with Google Maps, Recharts, and TanStack Table, which provided a clear, data-driven interface.
- Accelerated feature delivery by architecting the application with reusable components and robust state management structures using Zustand, applying the Atomic Design pattern and Clean Code principles to create an easy-to-maintain codebase.
- Refactored the platform's PDF generation system, enabling cost savings of thousands of Brazilian Reais per month and increasing the reliability of the company's infrastructure.
- Streamlined the development workflow by contributing to CI/CD workflows and version control, supporting continuous delivery and ensuring platform stability and reliability through end-to-end testing with Cypress and Jest.
- Internationalized the platform in 3 languages, enabling better commercial work, support, and access for new clients from Paraguay and Argentina.
- Used Hotjar to analyze user behavior and make data-driven decisions for UI/UX improvements.

Technologies: React, Next.js, TypeScript, JavaScript, HTML, CSS, SCSS, Tailwind, Zustand, Cypress, Jest, Git, CI/CD, Google Maps, Recharts, Atomic Design, Figma, UI/UX, Hotjar.

Volunteers for Ukraine

Software Engineer

March 2024 - July 2024 (5 months)

- Took part on the front-end development of a React web application for a project on crisis management to support Ukraine humanitarian crisis.

- Worked on the UI/UX responsive design and coding of layouts for Projects, Organizations and Volunteers sections.
- Used Atomic design pattern to create project components and reusable, easy to maintain, code.
- Applied Nodejs to contribute to the project's back-end.

Freelancer

Freelance Software Engineer

September 2023 - July 2024 (11 months)

- Improved my client's platform to better convey authority, convert sales, and manage customer information, improving their productivity, experience and profit.
- Designed and implemented layouts so the client could create and deliver their own courses within their platform.
- Assisted with the client's vision for the evolution of their platform, creating roadmaps to present and implement desired changes in sensible steps.
- Provided insight and helped the customer cut relevant costs monthly by reviewing their tool subscriptions.

Hype Empreendimentos

Software Engineer

April 2022 - October 2023 (1 year 7 months)

Curitiba, Paraná, Brazil

- Pioneered a SaaS platform for a financial technology spinoff (CapLink) by designing and deploying the first version of a platform that streamlined multi-million Brazilian Real real estate credit for large-scale construction projects using React and Next.js.
- Accelerated a complex credit approval pipeline by developing the frontend for a financial platform that digitized a previously slow and bureaucratic process, achieved by using D3.js to visually represent the pipeline steps, which significantly improved the user experience and contributed to faster client adoption.

- Built the foundation for a scalable product by architecting the platform's user interface with a modular, component-based design, using TypeScript to ensure type safety and applying principles of Clean Architecture.
- Implemented the frontend's GraphQL integration with backend services, collaborating to define schemas and consume data to build dynamic features.
- Applied web performance optimization, improving load times and interaction responsiveness through lazy-loading, and feedback-based refactors.
- Contributed to CI/CD workflows and version control using Git and GitLab, supporting continuous delivery and ensuring deployment reliability through end-to-end testing with Cypress and unit testing with Jest.
- Collaborated closely with multidisciplinary Agile teams, with engineers, analysts, and designers, to deliver features aligned with business goals and user needs.

Technologies: React, Next.js, TypeScript, JavaScript, HTML, CSS, D3.js, GraphQL, Git, GitLab, Cypress, Jest, Clean Architecture, UI/UX, Agile

Guarani Sistemas

Software Engineering Intern

May 2021 - November 2021 (7 months)

- Contributed to the front-end development of a business web application using Vue.js, HTML, CSS, and JavaScript, improving UI consistency and responsiveness.
- Resolved low- to medium-priority bugs and feature requests, enhancing user experience and overall system stability.
- Created detailed user stories for features beyond the MVP, supporting backlog grooming and sprint planning.
- Designed mobile-first mockups and UI flows in collaboration with product and design teams, ensuring accessibility and responsiveness across devices.
- Participated in daily Scrum meetings, tracked tasks in Jira, and collaborated using GitLab for version control and code reviews.
- Gained hands-on experience in Agile methodologies, UI/UX design, and collaborative software delivery in a production environment.

IFMG CAMPUS BAMBUÍ

Teaching Assistant

March 2018 - December 2018 (10 months)

- Assistance to students by solving exercises and clarifying doubts.
- Preparation of theoretical activities compatible with my own level of knowledge and experience.
- Development of complementary teaching material, under the supervision and approval of the teacher-advisor.

Education

IFMG - Campus Bambuí

Bachelor of Engineering, Computer Engineering · (2017 - 2022)

PUC Minas

Bachelor of Engineering - BE, Control and Automation Engineering · (January 2013 - June 2016)
